# Variable speed drives Altivar 312 

For 3-phase motors from 0.18 to 15 kW

Catalogue
мау 2011

The information provided in this documentation contains general descriptions and/or technical characteristics of the performance of the products contained herein. This documentation is not intended as a substitute for and is not to be used for determining suitability or reliability of these products for specific user applications. It is the duty of any such user or integrator to perform the appropriate and complete risk analysis, evaluation and testing of the products with respect to the relevant specific application or use thereof. Neither Schneider Electric nor any of its affiliates or subsidiaries shall be responsible or liable for misuse of the information contained herein.

## Variable speed drives <br> Altivar 312

Environmental characteristics

| Conformity to standards |  |  | Altivar 312 drives have been developed to conform to the strictest international standards and the recommendations relating to electrical industrial control devices (IEC), in particular: <br> IEC 61800-5-1 (low voltage), IEC 61800-3 (EMC immunity and conducted and radiated EMC emissions). |
| :---: | :---: | :---: | :---: |
| EMC immunity |  |  | IEC 61800-3, Environments 1 and 2 (EMC requirement and specific test methods) IEC 61000-4-2 level 3 (electrostatic discharge immunity test) IEC 61000-4-3 level 3 (radio-frequency radiated electromagnetic field immunity test) IEC 61000-4-4 level 4 (electrical fast transient/burst immunity test) IEC 61000-4-5 level 3 (surge immunity test) |
| Conducted and radiated EMC emissions for drives | ATV 312H••••• |  | IEC 61800-3, Environments: 2 (industrial power supply) and 1 (public power supply), restricted distribution |
|  | ATV 312H018M2...HU15M2 ATV 312H037N4...HU4ON4 |  | IEC 61800-3 category C2 With additional EMC filter (1): IEC 61800-3 category C1 |
|  | ATV 312HU22M2, <br> ATV 312HU55N4...HD15N4 |  | IEC 61800-3 category C3 With additional EMC filter (1): <br> IEC 61800-3 category C2 <br> IEC 61800-3 category C1 |
|  | ATV 312H018M3...HD15M3 |  | With additional EMC filter (1): <br> IEC 61800-3 category C2 |
| C€ marking |  |  | The drives are marked $\subset \in$ in accordance with the European low voltage (2006/95/EC) and EMC (2004/108/EC) directives |
| Product certification |  |  | UL, CSA, NOM, GOST, C-Tick and DNV |
| Degree of protection |  |  | IP 31 and IP 41 on upper part and IP 21 on connection terminals |
| Vibration resistance Drive not mounted on பr rail |  |  | Conforming to IEC 60068-2-6: 1.5 mm peak to peak from 3 to $13 \mathrm{~Hz}, 1$ gn from 13 to 150 Hz |
| Shock resistance |  |  | 15 gn for 11 ms conforming to IEC 60068-2-27 |
| Maximum ambient pollution Definition of insulation |  |  | Degree 2 conforming to IEC 61800-5-1 |
| Environmental conditions Use |  |  | IEC 60721-3-3 classes 3C2 and 3S2 |
| Relative humidity |  | \% | 5...95 non condensing, no dripping water, conforming to IEC 60068-2-3 |
| Ambient air temperature around the device | Operation | ${ }^{\circ} \mathrm{C}$ | $-10 \ldots+50$ without derating <br> $-10 \ldots+60$ with derating removing the protective cover on top of the drive (see derating curves, page 60430/4) |
|  | Storage | ${ }^{\circ} \mathrm{C}$ | - $25 . . .+70$ |
| Maximum operating altitude | ATV 312H $\bullet \bullet \bullet \bullet \bullet$ | m | 1000 without derating |
|  | ATV 312H $\bullet \bullet$ M2 | m | Up to 2000 for single-phase supplies and corner grounded distribution networks, derating the current by $1 \%$ for each additional 100 m |
|  | ATV 312H $\bullet \bullet$ M3 ATV 312H•••N4 ATV $312 \mathrm{H} \bullet \bullet \bullet$ S6 | m | Up to 3000 metres for three-phase supplies, derating the current by $1 \%$ for each additional 100 m |
| Operating position <br> Maximum permanent angle in relation to the normal vertical mounting position |  |  |  |

## Variable speed drives <br> Altivar 312

Electrical control characteristics

| Available internal supplies |  | Protected against short-circuits and overloads: <br> One $10 \mathrm{~V}=-\mathrm{( } / \mathrm{/}+8 \%$ ) supply for the reference potentiometer ( 2.2 to $10 \mathrm{k} \Omega$ ), maximum current 10 mA <br> One 24 V --- supply (min. 19 V , max. 30 V ) for the control logic inputs, maximum current 100 mA |
| :---: | :---: | :---: |
| Analog inputs |  | Sampling time < 8 ms <br> Resolution: 10 bits <br> Accuracy: $\pm 4.3 \%$ <br> Linearity: $\pm 0.2 \%$ of the maximum scale value Use: <br> - 100 m maximum with shielded cable <br> - 25 m maximum with unshielded cable |
|  | Al1 | One $0 \ldots 10 \mathrm{~V}=-$ analog voltage input, impedance $30 \mathrm{k} \Omega$, maximum safe voltage 30 V |
|  | Al2 | One $\pm 10 \mathrm{~V}$ bipolar voltage analog input, impedance $30 \mathrm{k} \Omega$, maximum safe voltage 30 V |
|  | $\overline{\text { Al3 }}$ | One $\mathrm{X}-\mathrm{Y}$ mA analog current input, X and Y programmable from 0 to 20 mA , with impedance $250 \Omega$ |
| Analog voltage outputs or analog current outputs configurable as logic outputs |  | 2 analog outputs: <br> - 1 analog voltage output (AOV) <br> 1 analog current output (AOC) configurable as a logic output. These 2 analog outputs cannot be used at the same time |
|  | AOV | $0 \ldots 10 \mathrm{~V}$--- analog voltage output, min. load impedance $470 \Omega$ 8 -bit resolution, accuracy $\pm 1 \%$, linearity $\pm 0.2 \%$ of the maximum scale value |
|  | AOC | 0... 20 mA analog current output, max. load impedance $800 \Omega$ <br> 8 -bit resolution, accuracy $\pm 1 \%$, linearity $\pm 0.2 \%$ <br> The AOC analog output can be configured as a 24 V logic output, max. 20 mA , min. load impedance $1.2 \mathrm{k} \Omega$ <br> Refresh time < 8 ms |
| Relay outputs | R1A, R1B, R1C | 1 relay logic output, one N/C contact and one N/O contact with common point Minimum switching capacity: 10 mA for $5 \mathrm{~V}=$ <br> Maximum switching capacity: <br> - On resistive load ( $\cos \varphi=1$ and L/R $=0 \mathrm{~ms}$ ): 5 A for $250 \mathrm{~V} \sim$ or $30 \mathrm{~V}=$ - On inductive load ( $\cos \varphi=0.4$ and L/R $=7 \mathrm{~ms}$ ): 2 A for $250 \mathrm{~V} \sim$ or 30 V -Sampling time $<8 \mathrm{~ms}$ <br> Switching: 100,000 operations |
|  | R2A, R2B | 1 relay logic output, one N/C contact, contact open on fault. Minimum switching capacity: 10 mA for 5 V --- <br> Maximum switching capacity: <br> - On resistive load ( $\cos \varphi=1$ and L/R $=0 \mathrm{~ms}$ ): 5 A for $250 \mathrm{~V} \sim$ or 30 V -- <br> - On inductive load ( $\cos \varphi=0.4$ and L/R $=7 \mathrm{~ms}$ ): 2 A for $250 \mathrm{~V} \sim$ or $30 \mathrm{~V}=$ Sampling time $<8 \mathrm{~ms}$ <br> Switching: 100,000 operations |
| LI logic inputs | LII...LI6 | 6 programmable logic inputs, compatible with PLC level 1, standard IEC/EN 61131-2 Impedance $3.5 \mathrm{k} \Omega$ <br> 24 V -.- internal or 24 V -.- external power supply (min. 19 V , max. 30 V ) <br> Max. current: 100 mA <br> Sampling time $<4 \mathrm{~ms}$ <br> Multiple assignment makes it possible to configure several functions on one input (example: LI1 assigned to forward and preset speed $2, \mathrm{LI} 3$ assigned to reverse and preset speed 3 ) |
|  | Positive logic (Source) | State 0 if $<5 \mathrm{~V}$ or logic input not wired State 1 if $>11 \mathrm{~V}$ |
|  | Negative logic (Sink) | State 0 if $>19 \mathrm{~V}$ or logic input not wired State 1 if < 13 V |
|  | CLI position | Connection to PLC output (see diagram on page 60430/2) |
| Maximum I/O wire size and tightening torque |  | $\begin{aligned} & 2.5 \mathrm{~mm}^{2}(\text { AWG } 14) \\ & 0.6 \mathrm{Nm} \end{aligned}$ |

| Communication port characteristics |  |  |
| :---: | :---: | :---: |
| Available protocols |  | Modbus and CANopen protocols integrated in the drive. Both these protocols can be accessed via a single RJ45 connector on the underside of the drive. |
| Modbus protocol |  |  |
| Structure | Connector | RJ45 |
|  | Physical interface | RS 485 |
|  | Transmission mode | RTU |
|  | Transmission speed | Configurable via the Human-Machine interface, remote display terminals or SoMove setup software: 4800, 9600 or 19200 bps |
|  | Number of subscribers | 31 |
|  | Address | 1 to 247 , configurable via the Human-Machine interface, remote display terminals or SoMove setup software |
| Services | Functional profiles | CiA 402 |
|  | Messaging | Read Holding Registers (03) Write Single Register (06) Write Multiple Registers (16) Read Device Identification (43) |
|  | Communication monitoring | Configurable |
| CANopen protocol |  |  |
| Structure | Connector | RJ45 |
|  | Network management | Slave |
|  | Transmission speed | Configurable via the Human-Machine interface, remote display terminals or SoMove setup software: $10,20,50,125,250,500 \mathrm{kbps}$ or 1 Mbps |
|  | Number of subscribers | 127 |
|  | Address (Node ID) | 1 to 127, configurable via the Human-Machine interface, remote display terminals or SoMove setup software |
| Services | Number of PDOs (Process Data Objects) | 2 PDOs: <br> - PDO 1: cannot be configured <br> - PDO 6: can be configured |
|  | PDO modes | PDO 1: asynchronous <br> PDO 6: asynchronous, Sync, cyclic asynchronous |
|  | Number of SDOs (Service Data Objects) | 1 receive SDO and 1 transmit SDO |
|  | Functional profiles | CiA 402 |
|  | Communication monitoring | Node guarding and Heartbeat, Boot-up messages, Emergency messages, Sync and NMT |
| Diagnostics | Using LEDs | On Human-Machine interface |

## Characteristics (continued), special uses

## Variable speed drives <br> Altivar 312

## Torque characteristics (typical curves)

The curves opposite define the available continuous torque and transient overtorque for both force-cooled and self-cooled motors. The only difference is in the ability of the motor to provide a high continuous torque at less than half the nominal speed.

1 Self-cooled motor: continuous useful torque (1)
2 Force-cooled motor: continuous useful torque
3 Transient overtorque for 60 s
4 Transient overtorque for 2 s
5 Torque in overspeed at constant power (2)

## Special uses

## Use with a motor with a different power rating to that of the drive

The device can power any motor which has a lower rating than that for which the drive was designed.
For motor ratings slightly higher than that of the drive, check that the current taken does not exceed the continuous output current of the drive.

## Testing on a low power motor or without a motor

In a testing or maintenance environment the drive can be checked without having to switch to a motor with the same rating as the drive (particularly useful in the case of high power drives). This use requires deactivation of motor phase loss detection.

## Use of motors in parallel

The drive rating must be greater than or equal to the sum of the currents and powers of the motors to be controlled.
In this case, it is necessary to provide external thermal protection for each motor using probes or thermal overload relays.
If three or more motors are connected in parallel, it is advisable to install a motor choke between the drive and the motors.
See page 60427/2.

## Motor switching at the drive output

Switching can be carried out with the drive locked or unlocked. In the case of switching on-the-fly (drive unlocked), the motor is controlled and accelerated until it reaches the reference speed smoothly following the acceleration ramp. This use requires configuration of automatic catching a spinning load ("catch on the fly") and activation of the function which manages the presence of an output contactor.

Note: Depending on the drive rating, downstream ferrite suppressors may be required between the drive and the output contactor (see page 60427/2).

Typical applications: loss of safety circuit at drive output, bypass function, switching of motors connected in parallel.

Recommendations for use: synchronize control of the output contactor with that of a freewheel stop request from the drive on a logic input.
(1) For power ratings $\leqslant 250 \mathrm{~W}$, less derating is required (20\% instead of $50 \%$ at very low frequencies).
(2) The nominal motor frequency and the maximum output frequency can be adjusted from 40 to 500 Hz . The mechanical overspeed characteristics of the selected motor must be checked with the manufacturer.

[^0]:    (1) These values are given for a nominal switching frequency of 4 kHz , for use in continuous operation.

    The switching frequency is adjustable from 2 to 16 kHz . Above 4 kHz , derate the nominal drive current. The nominal motor current should not exceed this value. See derating curves on page 60430/4.
    (2) Typical value for a 4 -pole motor and a maximum switching frequency of 4 kHz , with no line choke for max. prospective line Isc (4).
    (3) Nominal supply voltage, min. U1, max. U2: 200 (U1)... 240 V (U2), 380 (U1) ... 500 V (U2), 525 (U1)... 600 V (U2).
    (4) If line Isc is greater than the values in the table, add line chokes (see page 60425/3).
    (5) Drives supplied with category C2 or C3 integrated EMC filter. This filter can be disconnected
    (6) If a communication card is used, it takes the place of the control I/O card. To reduce installation costs, the drive can be ordered without a control I/O card. To do this, simply add a B at the end of the reference. For example: ATV 312H075N4 becomes
    ATV 312H075N4B. The communication card must be ordered separately (see page 60428/2).
    (7) EMC filter available as an option (see page 60426/3).
    (8) Mandatory line choke to be ordered separately (see page 60425/3).
